Coronavirus (COVID-19) Vaccines

Are they safe?

What you need to know

Are the vaccines safe?

Millions of people have been given the COVID-19 vaccine. Serious side effects are rare and no long-term complications have been reported.

Will the vaccine give me COVID-19?

The vaccine cannot give you COVID-19.

It normally takes years to develop a vaccine

Researchers meet more regularly and use the internet to communicate instead of travelling. They answer questions very quickly, and non-COVID-19 research has been reduced. **250,000 people** in the UK signed up for the vaccine trials straight away, along with **hundreds of thousands** more from around the world. All these things made the process much quicker.

Are results from vaccine trials accurate and reliable?

- The Health Research Authority (HRA), who protect the public in health research, made sure that the research was, and still is, done properly.
 - There were **650 COVID-19 studies**, for which around **400,000 people** in the UK were recruited. All the procedures necessary to ensure the vaccines are safe were followed.
 - The vaccines met the strict safety standards of the Medicines and Healthcare products Regulatory Agency (MHRA), who make sure medicines are safe for use in the UK.
-

I'm pregnant, can I still get the vaccine?

Currently, there's no evidence that COVID-19 vaccines are unsafe if you're pregnant. But more evidence is needed. Check with your GP first.

COVID-19 vaccine ingredients

- **Approved COVID-19 vaccines do not contain any animal products** (beef, pork, gelatine or egg).
 - They do contain a medicine called mRNA which helps our bodies to make the antibodies needed to protect us from COVID-19. **mRNA cannot change or alter your DNA.**
-

COVID-19 vaccines and microchips

It would be impossible to inject a microchip using the needle required to provide a COVID-19 vaccine. The microchip would be too large (at least 12mm x 2mm including casing) to be injected through a needle.

Should I get vaccinated?

Vaccination will help to protect you and your loved ones. **The more people are vaccinated the better things will be.** The NHS has a clear vaccine plan and will contact you when it's your turn to get the vaccine. Those most at risk are being vaccinated first.

While the vaccines are being rolled out, keep doing the right things to keep yourself and your loved ones safe.
